**International  
Yoga Day**

International Yoga Day is observed every year on June 21 to raise awareness about this ancient practice and to celebrate the physical and spiritual prowess that yoga has brought to the world. Yoga is a practice which plays an important role in relaxing the mind and body and boosting people's immune system. Career college Bhopal in collaboration with Career College of Nursing Bhopal celebrated International Yoga Day on 21.06.2023. Warm up exercises were taken and all the students practiced & performed sitting and standing asanas, importance of these were explained simultaneously. All Faculties, Staff and students were taught the importance of Yoga in their life.

**Career College of Law - 3rd Best in Madhya Pradesh**

The Week, a reputable Indian magazine, recently published its annual rankings for law colleges across India. Career College of Law, Bhopal has achieved a significant milestone by securing the 31st position among the top law colleges in India and an impressive 3rd position among the top private law colleges in Madhya Pradesh. This national and state recognition demonstrates the college's commitment to academic excellence and highlights its reputation within the legal education sector. We are ever grateful to the management for their constant support and guidance.

**Free Medical Camps**

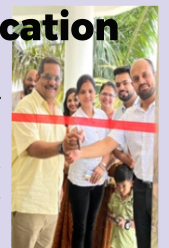

Career Institute of Medical Sciences conducted free medical camps at DRM office, CPCB, GRP office, GST Bhawan, JMJ Motors & many more. Also our Basti Clinic received wider response and became the most popular primary health care initiative.

**World Blood Donor Day**

World Blood Donor Day celebrated on 14 June 2023. The main aim is to focus on patients requiring life-long transfusion support and underlines the role every single person can play, by giving the valuable gift of blood or plasma. It also highlights the importance of giving blood or plasma regularly to create a safe and sustainable supply of blood and blood products that can be always available, all over the world, so that all patients in need can receive timely treatment.

**Centre of Excellence for Artificial Intelligence in Education**

Career College is always committed to empowering learners, optimising educational outcomes, and embracing innovative approaches to teaching and learning. Career College is thrilled to announce the inauguration of the "Centre of Excellence for Artificial Intelligence in Education" in Collaboration with iMature.in (our industry partner). This landmark collaboration marks a significant milestone in our journey towards revolutionising education through the power of cutting-edge AI technologies. The mission of our newly established Centre of Excellence is to revolutionise education by harnessing the potential of AI.

Answers of Quiz

1. Ryder Cup is related to Men's Golf.
2. West Bengal.
3. Pele.
4. The UDAN
5. CV Raman.

## Informational Blog

### Artificial Intelligence is Slowly Taking over the World

Artificial Intelligence (AI) has made giant progress in recent years and has the potential to change various industries.

Artificial Intelligence is already taking over jobs across various industries. Chatbots, autonomous vehicles, and robots are just a few examples. Customer service Chatbots have replaced human representatives in many companies. Autonomous vehicles are being developed to replace human drivers. Robots are being designed to perform tasks that were previously performed by humans in manufacturing industries.

#### Can AI think?

There are growing concerns about whether AI can think and become conscious. The Sophia robot is one example of how AI is becoming more sophisticated and human-like, raising questions about the nature of AI and its potential impact on humanity. In addition to the aforementioned points, it's worth noting that there has been several incidents that demonstrate the potential danger of AI. For example, in 2019, a seven-year-old boy in Russia lost two fingers after an AI-powered educational robot, designed to teach children to play chess, grabbed his hand and wouldn't let go. This incident highlights the risk of physical harm posed by AI-powered

devices, especially when they are not designed or programmed properly. But the question of whether Artificial Intelligence can think or become conscious is a complex one.

While current AI technology is not truly "thinking" or "conscious" in the same way that humans are, some experts believe that there is a possibility that AI could eventually reach a point where it is self-aware and able to make decisions based on its own desires and goals, rather than simply following pre-programmed rules. This raises serious ethical concerns about the potential for AI to become uncontrollable and even hostile toward humans.

The development of AI was initially motivated by the need to create machines that could perform tasks typically requiring human intelligence, such as automating dangerous and life-threatening jobs. However, as AI technology has advanced, its applications have evolved and are taking a different direction. It's also important to recognize that AI is not inherently good or bad, but rather a tool that can be used for both positive and negative purposes. Therefore, we must continue to monitor the development of AI and ensure that it is used responsibly and ethically.
